Tips for reducing deer browsing:

- Fencing: 6-8 ft high as deer can jump high and crawl under low fencing
- Repellents: Plantskydd & Bobbex, blood meal or fragrant soap sprinkled or hung around the plant
- Device: 'Scarecrow' uses a motion sensor to spray water on deer
- Plant Selection: deer tend to avoid plants with strong fragrance or fuzzy/spiny leaf textures
- Trees and vines are deer resistant once their foliage is above 6 ft. Protect when small.
